EDUCATION

Prairie View A&M University Graduating Aug 2028
MSc Computer Science Prairie View, TX

Relevant Coursework: Fundamentals and Concepts of Programming Languages, Advanced Database Management System, Software Engineering, Advanced Operating System, Advanced Computer Architecture, Design and Analysis of Algorithms

EXPERIENCE

Safelynk Sep. 2025 – Aug. 2026
Founder & Fullstack Software Engineer Remote, Texas

- Built a multi-vendor e-commerce platform using **Next.js, Flutter, and Node.js/PostgreSQL**, shipping storefronts, vendor dashboards, and an admin console.
- Built an **AI** business assistant with Retrieval-Augmented Generation with **LLM** tool calling for context aware, natural-language queries over vendor store data
- Built a multi-tenant subdomain system on **Cloudflare** Pages and Next.js middleware that provisions each vendor a branded store URL from a single deployment.
- Established **CI/CD** pipelines for automated testing, **Docker** image builds, and production deployments, reducing deployment time, and improving release consistency.

Urban Blu Technology Limited Sep. 2024 – Aug. 2025
Fullstack Software Engineer Accra, Ghana

- Built Next.js player and admin portals and an Android **POS** app, replacing paper ticketing for 200+ retail agents.
- Engineered a Machine Learning based transaction **risk-scoring pipeline** using behavioral and transactional features to detect anomalous staking and withdrawal activity in real time.
- Added **GPS** telemetry to all POS devices for real-time monitoring from the admin dashboard.

Mova May 2024 – Sep. 2024
Mobile App Engineer Accra, Ghana

- Collaborated on the Customer and Driver apps in **SwiftUI** using **WebSockets** for real-time dispatch and status updates, improving responsiveness.
- Built turn-by-turn navigation and live route syncing between user and driver apps using Google Maps SDK, providing accurate ETAs and responsive rerouting.

ViuHealth Inc Dec. 2022 – Apr. 2024
Software Engineering Consultant New York, USA

- Built **Datadog**-based observability with APM, logging, and infrastructure monitoring, reducing production issue detection time by ~60%.
- Containerized backend services with **Docker** and deployed them behind **Nginx** and **AWS** load balancers, enabling horizontal scaling, health checks, and zero-downtime service replacement under increasing traffic.
- Migrated server and **PostgreSQL** database from Digital Ocean to AWS **EC2** and **RDS** while reducing costs by 60% and ensuring zero data loss and minimal downtime.

PROJECTS

PgWorker
Open-Source Contributor

- Developed PgWorker, an open-source Dart job scheduler backed by PostgreSQL, with type-safe handlers, cron-based scheduling, and restart-resilient job persistence.

Pharaoh
Open-Source Contributor

- Wrote **unit and integration tests** across routing, middleware, and HTTP response handling to catch regressions before release.
- Built example apps showing real-world use of the framework, including an API-key–protected REST service, route groups, middleware chaining, rate limiting, and static file serving.

LEADERSHIP

- **Mobile Dev Lead, Google Developer Students Club, University of Ghana**: Organized Flutter workshops for 200+ students.

SKILLS

Developer Tools: Git, AWS, Cloudflare, Docker, Claude, Cursor, Redis, CI/CD, PostgreSQL, Sentry, MongoDB, Postman
Frameworks: Node/ExpressJs, SpringBoot, Angular, SwiftUI, ReactJs, Next.js, Tailwind CSS, Flutter, React Native
Programming: Python, JavaScript, TypeScript, Go, Java, Swift, SQL, Dart, Data Structures & Algorithms
